K-th Largest-1

- Given a set of integers (S), find the k -th largest element in it. **Input:** S and k

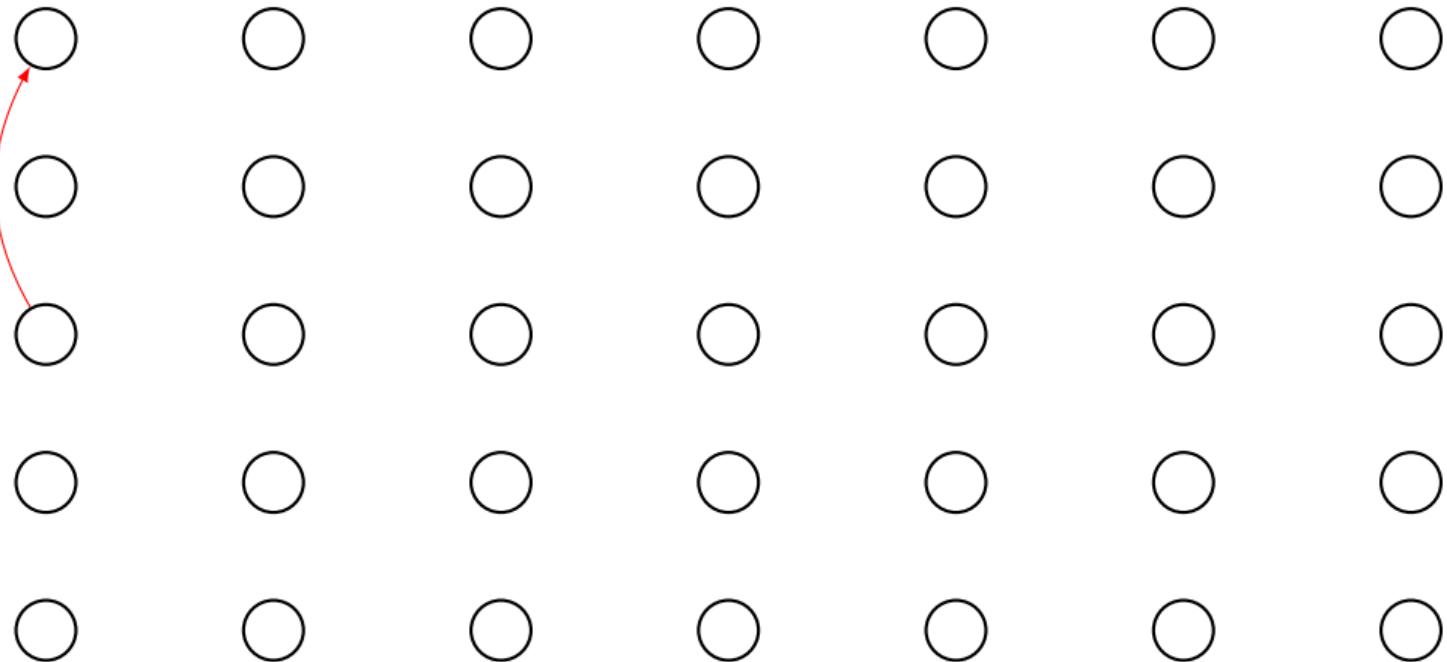

K-th Largest-1

- Given a set of integers (S), find the k -th largest element in it. **Input:** S and k
- Steps: $\text{selection}(S, k)$
 - if $|S| = 1$ return s_1
 - Choose an element $v \in S$
 - Split S such that $S_L = \{u | u < v\}$, $S_v = \{u | u = v\}$, $S_R = \{u | u > v\}$
 - if $k \leq |S_L|$ return $\text{selection}(S_L, k)$
 - if $|S_L| < k \leq |S_L + S_v|$ return v
 - if $k > |S_L + S_v|$ return $\text{selection}(S_R, k - |S_L| - |S_v|)$

K-th Largest-2

- Given a set of integers (S), find the k -th largest element in it. **Input:** S and k

K-th Largest-2

- Given a set of integers (S), find the k -th largest element in it. **Input:** S and k
- Steps: $\text{selectionMoM}(S, k)$
 - if $|S| = 1$ return s_1
 - // Choose an element $v \in S$

K-th Largest-2

- Given a set of integers (S), find the k -th largest element in it. **Input:** S and k
- Steps: $\text{selectionMoM}(S, k)$
 - if $|S| = 1$ return s_1
 - // Choose an element $v \in S$
 - $m = \lceil |S|/5 \rceil$
 - for i in 1 to m
 - $M[i] = \text{findMedian}(S[5i - 4, \dots, 5i])$
 - $v = \text{selectionMoM}(M[1, \dots, m], \lfloor m/2 \rfloor)$

K-th Largest-2

- Given a set of integers (S), find the k -th largest element in it. **Input:** S and k
- Steps: $\text{selectionMoM}(S, k)$

- if $|S| = 1$ return s_1
- // Choose an element $v \in S$
- $m = \lceil |S|/5 \rceil$
- for i in 1 to m
- $M[i] = \text{findMedian}(S[5i - 4, \dots, 5i])$
- $v = \text{selectionMoM}(M[1, \dots, m], \lfloor m/2 \rfloor)$
- Split S such that $S_L = \{u | u < v\}$, $S_v = \{u | u = v\}$, $S_R = \{u | u > v\}$
- if $k \leq |S_L|$ return $\text{selectionMoM}(S_L, k)$
- if $|S_L| < k \leq |S_L + S_v|$ return v
- if $k > |S_L + S_v|$ return $\text{selectionMoM}(S_R, k - |S_L| - |S_v|)$

Thank you!
